TRP LABORATORIES EXPANDS INFRASTRUCTURE ENGINEERING AND MATERIALS TESTING CAPABILITIES THROUGH ACQUISITION OF TOURNEY CONSULTING GROUP

Acquisition expands TRP's engineering and materials-testing capabilities into infrastructure and construction markets, while preserving the technical integrity and client-first service that define both firms.

TROY, Mich. — September 14, 2026 — TRP Laboratories (TRP), a national provider of independent testing and engineering solutions, today announced the acquisition of Tourney Consulting Group (TCG). Based in Kalamazoo, Michigan, TCG is a leading consulting, engineering, and materials-testing firm specializing in concrete durability, corrosion, materials science, and service-life assessment. The combination expands TRP's engineering expertise and testing capabilities, enabling customers to access broader technical resources for transportation, infrastructure, manufacturing, and research applications.

The combination brings together two organizations united by a commitment to technical excellence, responsive service, and practical, evidence-based solutions. TRP contributes a broad national laboratory network and extensive capabilities in transportation, component, environmental and custom-engineered testing. TCG brings nationally recognized expertise in concrete durability, corrosion mitigation, and service-life engineering. Its deep technical knowledge and research capabilities complement TRP's existing testing platform, creating opportunities for enhanced collaboration and innovation.

Together, the companies are positioned to offer customers a broader range of complementary engineering and testing resources, deeper technical collaboration, and greater capacity to support complex programs. The acquisition also creates opportunities to share best practices, laboratory capabilities, and specialized knowledge across the organization — strengthening innovation and helping customers make confident decisions throughout the product and infrastructure life cycle.

"TCG has earned tremendous respect for its technical expertise, integrity, and unwavering commitment to its clients. By joining our organizations, we will create meaningful new opportunities for our customers and our people, while preserving the qualities that have made TCG successful. Our shared passion for technical excellence and exceptional customer service will drive continued investment in our team. That investment will expand our capabilities and create even greater value for the markets we serve," said Colin Speedie, Chief Executive Officer of TRP Laboratories.

A Focus on Continuity and Confidence

TRP and TCG are committed to an orderly integration that prioritizes clear communication and uninterrupted client service. Customers will continue working with the technical professionals they know, while employees gain access to broader resources and new opportunities for collaboration and growth.

“Joining TRP gives TCG the resources to expand our capabilities while preserving the technical rigor, expertise, responsiveness, and client relationships that define our firm,” said Dr. Kyle D. Stanish, President and Managing Principal of TCG. “Our team is excited to collaborate across a larger laboratory network and bring even greater value to clients facing complex infrastructure and materials challenges.”

“This acquisition is about building on strengths,” Speedie added. “Together, we have an opportunity to accelerate innovation, broaden our technical capabilities, and help customers solve increasingly complex engineering and materials-performance challenges for tomorrow’s world. We believe this combination creates a stronger organization positioned for long-term growth.”

About TRP Laboratories

Headquartered in Troy, Michigan, TRP Laboratories provides independent testing and engineering solutions for manufacturers, OEMs, and aftermarket producers. Its capabilities include vehicle and engine testing, component, and systems testing, environmental simulation, emissions-related testing, durability and vibration testing, and custom-engineered programs delivered through a nationwide network of laboratories.
